

The Future of Security is Logical

Does your CCTV surveillance system provide you with these features?

- Up to 10 times clearer image quality than conventional camera systems?
- Automatically email you still images or short video clips of events pre-determined by you including triggering by movement, time, audio sensing, temperature, shock or even a combination of sensors in a particular order?
- Record synchronised high quality audio to accompany your high quality video?
- Ability to view angles up to 180 degrees in width in a single image?
- Ability to ignore bright areas to ensure your target area exposure is always optimised?
- Allow you to view protected, secure, live and recorded video from any web browser enabled device such as a PC, smart phone, tablet etc without the need to load special software?
- Allow you to easily control equipment such as gates, doors, security systems and machinery whilst viewing the live image?
- Allow you to conduct 2-way VOIP communications to any camera when integrated into your VOIP service?
- Automatically play an audio file(s) to deter a possible intruder when activity is detected during your nominated day and time period(s)?
- Cost you approximately 1/6th of the power usage of a conventional CCTV system to run?
- Ability to imprint data such as cash register transactions into the video and automatically email any "No Sale" or irregular transaction video to you?
- Work reliably between temperatures of -30 to +60 degrees Celsius, in all weather conditions and able to be high pressure cleaned for easier maintenance?
- Require no license fees, software fees or ongoing royalties ever?

The systems we provide do!

Simply telephone us or send an email enquiry to sales@logicalservices.com.au to arrange a no obligation product demonstration of our unique way to deliver effective, reliable security.
